

Press Release – 16/11/06

Aldridge - West Midlands

FOR IMMEDIATE RELEASE

“New UK Internet Phone Service launches with Real Telephone Numbers to shake up VoIP market”

VoIP operator G3T announces the arrival of NETePhone, a revolutionary internet telephone service where every user gets a real UK Telephone Number as standard with no rental charges or contracts.

Calls to other NETePhone users won't cost a penny, regardless of where they are in the world, so you can call friends and family abroad completely free of charge.

Users can also save up to 90% on phone calls to International landlines and mobiles. Calls to landlines and mobiles are from just 2p per min, including popular destinations such as USA, Canada and Australia.

The UK Telephone Number and software stays with you and can be used anywhere in the world. The low cost 'Pay as you Go' philosophy means no monthly contract or line rental which makes the NETePhone software ideal for a second line, or use while traveling abroad.

The software is free to download and 0870 dialing codes are completely free, with geographic numbers charged at a one-off £12. If you top-up £25 when you sign-up you can choose any dialing code for free and get a free USB handset.

Gerry Leighton, CEO of G3T said “We've adopted a new philosophy to our competitors and want everyone to feel as comfortable as possible with VoIP. We decided nothing was better than making sure everyone gets a real UK Telephone Number. NETePhone looks great, and is fast and simple to download and install too.”

NETePhone uses G3T's patented e2e Technology setting up calls directly between users ensuring better quality and resilience. The technology is a more secure and efficient alternative to other internet telephone providers such as Skype who rely on their users to host phone calls and can suffer from privacy, reliability and quality issues when call volume hits peak times.

Calls between NETePhones are always free and direct between users resulting in a more secure and private method of communications. This security means the NETePhone is free from virus and hacking risks and has superior performance with no resource sharing issues like peer-2-peer based products.

If you prefer using a normal looking Telephone to make calls on the internet, G3T offers their ePhone service which uses the same technology but built into a physical telephone which plugs directly into your Internet Router. What's more, it's not necessary to have your PC switched on to use the ePhone.

Download the software for free at www.netephone.uk.net. The £1 Walsall promotion is available until 24th December 2006. Hundreds of other area codes are available too, and users can even choose a 0870 number.

About Group 3 Technology Limited

Group 3 Technology Limited (G3T) is one the UK's leading Internet Software development companies specializing in communications based products. The company was founded in 2000 and holds several patents and trademarks in the IT sector. G3T have offices in UK and Asia.
